TRADE SECRET INFORMATION

Not for release under HIPAA or other data disclosure laws that exempt trade secrets from disclosure.

[6.6 / 1 / 1.3.10]

INTERPRETIVE CONSIDERATIONS

MCMI-III reports are normed on patients who were in the early phases of assessment or psychotherapy for emotional discomfort or social difficulties. Respondents who do not fit this normative population or who have inappropriately taken the MCMI-III for nonclinical purposes may have inaccurate reports. The MCMI-III report cannot be considered definitive. It should be evaluated in conjunction with additional clinical data. The report should be evaluated by a mental health clinician trained in the use of psychological tests. The report should not be shown to patients or their relatives.

The client is a 34-year-old married Hispanic female with 13 years of education. She is currently being seen as an outpatient, and she reports that she has recently experienced problems that involve illness or fatigue and low self-confidence. These self-reported difficulties, which have occurred in the last one to four weeks, may take the form of an Axis I disorder.

The BR scores reported for this individual have been modified to account for the psychic tension indicated by the elevation on Scale A (Anxiety).
