

**Coloured Progressive Matrices and Crichton Vocabulary Scale Manual
(Raven, 2008)**

Errata

It has come to our attention that there is an error on page 44 of this manual.

The example given for the confidence intervals says the following:

Edward is seven years old and obtains a score of 43 on the CVS. This means that there is a 25% (1 in 4) chance that his true score lies outside the limits of 43 +/- 3, i.e. beyond 46 or under 40.

The +/- 3 figure is incorrect and should be +/- 4 as expressed in Table 6.2. The example should then read:

Edward is seven years old and obtains a score of 43 on the CVS. This means that there is a 25% (1 in 4) chance that his true score lies outside the limits of 43 +/- 4, i.e. beyond 47 or under 39.

This error will not effect computations of the results as the Table gives the correct figures. The error will be corrected on reprint.
