Dear Colleague,

Re: Information on Rookwood Driving Battery Errata

Thank you for your purchase of the Rookwood Driving Battery; we hope you are finding it a useful and informative tool.

We are writing to inform you that we have recently discovered a typing error in the manual for this assessment:

Page 28 of the manual (line 11 of 'Recording and Scoring') currently reads '*Fail the individual if performance is too slow (fewer than 36 targets reached), or if the error rate is too great as a percentage of the target number reached (**12%** or more)*'. This last figure should read (**21.6%** or more).

Please adjust your manual(s) accordingly.

Please also adjust Item 12 on the record form (column C) from **12%** to **21.6%** as highlighted below:

12. Divided Attention

A	B	C	D
Target number reached out of 86 (fail criterion = less than 36th target reached):	Number of targets missed before reaching A:	% errors (B/A x 100) (fail criterion = ≥ 12%)	"Threes" (number complete) (fail criterion = ≤ 5)
Pass / Fail		Pass / Fail	Pass / Fail
E: Additional information (see Administration and Scoring Manual for further scoring criteria).			
Profile Score: (Pass A, C and D = 0; Fail A, C or D = 1)			
Pass / Fail			

We apologise for any inconvenience this has caused. If you do have any further questions please contact our UK customer services team on + 44 (0) 845 630 8888 or email us at info@psychcorp.co.uk

Yours Sincerely

Shelley Hughes
