

It has come to our attention that the Wellbeing Evaluation Scale (WES) manual contains an error. On page 35 of the manual 'Demographics' the third paragraph currently reads:

There was no significant correlation between age and total WES score ($r = 0.94$, $p = .198$).

This should read:

There was no significant correlation between age and total WES score ($r = 0.094$, $p = <0.00001$)

Please do not hesitate to contact us as info@psychcorp.co.uk if you would like further clarification.

We apologise for any inconvenience this may cause.
