# What is Q-interactive?

Q-interactive is a 1:1 iPad®-based testing system that helps administer, score, and report 20 different clinical assessments, including WISC®-V UK, WIAT®-III UK, and CELF®-5 UK. The system is ideal for Educational and Clinical psychologists, SLT's, and SENCO's. With Q-interactive, you can create personalized batteries at both instrument and subtest levels.

Testing takes place on two iPad devices in an app called "Assess." Use the first iPad to access test administration instructions, score and record responses, and control visual stimuli. The examinee uses the other iPad to view and respond to stimuli.

- Digitally captured responses.
- Immediate scores that enable you to adapt the assessment session to your client's needs.
- Permanent access to scores, all raw examinee responses, and any notes taken.
- Score reports can be generated and can be saved to the computer for later access.
