

SAMPLE REPORT

Case Description: John W. — Airline Pilots Adjustment Rating Report

This case illustrates the test-retest procedure used by Dr. James N. Butcher, author of the Minnesota Report™: Revised Personnel System—3rd Edition, for reducing test defensiveness.

Job applicants often present themselves in a very favorable light, minimizing problems and asserting good psychological adjustment. If they are administered a psychological test as part of the application process and respond defensively to the items, the results may be invalid. However, research has shown that people tend to be less defensive in their responses to the MMPI-2 if they are warned that the test includes measures to detect defensiveness and faking. When people are encouraged to respond honestly to avoid invalidating the test, they tend to respond more openly. Instructions such as the following are usually effective.

“When taking psychological tests, some people try to create an overly positive or overly negative impression of themselves. As a result, their test results may not be usable. The MMPI-2 includes several measures to evaluate whether people responded truthfully to the items. To ensure that your results will provide accurate information about you, please respond honestly to the items and try not to leave any of them blank.”

Following is an example of a test-retest assessment with the MMPI-2. After the first administration produced invalid results, the test was administered again with instructions similar to those above. The second administration produced more usable personality information than the first.

The applicant, John W., is a 44-year-old pilot who is a captain with a regional commuter airline. He graduated from a four-year aviation college with a degree in aviation science. He started flying for the regional carrier three years ago following his discharge from the Marine Corps. He spent 20 years in the service, where he flew helicopters and fixed-wing jet aircraft. He was discharged from the military with the rank of major. The background investigation disclosed three driving offenses in the past 10 years and no other arrests.

Case descriptions do not accompany MMPI-2 reports, but are provided here as background information. The following report was generated from Q-global™, Pearson’s web-based scoring and reporting application, using Mr. W.’s responses to the MMPI-2. Additional MMPI-2 sample reports, product offerings, training opportunities, and resources can be found at PearsonClinical.com/mmpi2.

WORK DYSFUNCTION ITEMS

The following items may be significant in understanding the client's work performance. These items have been found to be related to dysfunctional attitudes or negative behavior in employment situations. Although these items may serve as a source of hypotheses for further investigation, caution should be used in interpreting individual items because the respondent may have misread the item or inadvertently marked the wrong answer.

Any Work Dysfunction items he endorsed are listed below with the direction of his endorsement indicated in parentheses. The endorsement percentages of different reference groups are presented in brackets following the item. The first number "N" is the percentage of the MMPI-2 normative sample who endorsed that item in the scored direction. The second number "P" is the percentage of individuals in the large job applicant sample (Pearson Assessments, 1995) who endorsed the item in the scored direction.

243. Item Content Omitted. (True) [N = 32%, P = 13%]

521. Item Content Omitted. (False) [N = 27%, P = 16%]

559. Item Content Omitted. (True) [N = 15%, P = 9%]

ITEMS
NOT
SHOWN

Special Note:

The content of the test items is included in the actual reports. To protect the integrity of the test, the item content does not appear in this sample report.

OMITTED ITEMS

The client omitted the following items. It may be helpful to discuss these omissions with him to determine the reason for noncompliance with the test instructions.

- 337. Item Content Omitted.
- 479. Item Content Omitted.

Special Note:

The content of the test items is included in the actual reports. To protect the integrity of the test, the item content does not appear in this sample report.

End of Report

NOTE: This MMPI-2 report can serve as a useful guide for employment decisions in which personality adjustment is considered important for success on the job. The decision rules on which these classifications are based were developed through a review of the empirical literature on the MMPI and MMPI-2 with normal-range individuals (including job applicants) and the author's practical experience using the test in employee selection. The report can assist psychologists and physicians involved in personnel selection by providing an "outside opinion" about the applicant's adjustment. The MMPI-2 should NOT be used as the sole means of determining the applicant's suitability for employment. The information in this report should be used by qualified test interpretation specialists only.

This and previous pages of this report contain trade secrets and are not to be released in response to requests under HIPAA (or any other data disclosure law that exempts trade secret information from release). Further, release in response to litigation discovery demands should be made only in accordance with your profession's ethical guidelines and under an appropriate protective order.

Any Work Dysfunction items he endorsed are listed below with the direction of his endorsement indicated in parentheses. The endorsement percentages of different reference groups are presented in brackets following the item. The first number "N" is the percentage of the MMPI-2 normative sample who endorsed that item in the scored direction. The second number "P" is the percentage of individuals in the large job applicant sample (Pearson Assessments, 1995) who endorsed the item in the scored direction.

243. Item Content Omitted. (True) [N = 32%, P = 13%]

521. Item Content Omitted. (False) [N = 27%, P = 16%]

559. Item Content Omitted. (True) [N = 15%, P = 9%]

Special Note:

The content of the test items is included in the actual reports. To protect the integrity of the test, the item content does not appear in this sample report.

OMITTED ITEMS

The client omitted the following items. It may be helpful to discuss these omissions with him to determine the reason for noncompliance with the test instructions.

- 337. Item Content Omitted.
- 479. Item Content Omitted.

Special Note:

The content of the test items is included in the actual reports. To protect the integrity of the test, the item content does not appear in this sample report.

End of Report

NOTE: This MMPI-2 report can serve as a useful guide for employment decisions in which personality adjustment is considered important for success on the job. The decision rules on which these classifications are based were developed through a review of the empirical literature on the MMPI and MMPI-2 with normal-range individuals (including job applicants) and the author's practical experience using the test in employee selection. The report can assist psychologists and physicians involved in personnel selection by providing an "outside opinion" about the applicant's adjustment. The MMPI-2 should NOT be used as the sole means of determining the applicant's suitability for employment. The information in this report should be used by qualified test interpretation specialists only.

This and previous pages of this report contain trade secrets and are not to be released in response to requests under HIPAA (or any other data disclosure law that exempts trade secret information from release). Further, release in response to litigation discovery demands should be made only in accordance with your profession's ethical guidelines and under an appropriate protective order.
