

NEPSY-II

SECOND EDITION

Tailored assessments for toddlers to teens

The NEPSY-II is the most comprehensive neuropsychological battery for children and adolescents. Covering 6 domains of cognitive functioning, the stand-alone nature of the subtests enables clinicians to create tailored assessments specific to a child's situation and helps answer referral questions and diagnostic concerns.

- Comprehensive evaluation with a **single tool**
- **Wide age range** – from 3 to 16 years
- **Flexible administration** time depending on the needs and characteristics of the child
- Supports **differential diagnosis**, evaluating **strengths** and **weaknesses**, and helps determine **intervention strategies**
- Allows **monitoring change** in functioning over time

OVERVIEW

Qualification Level: C

Ages: 3:0–16:11 years

Administration Options:

Paper-and-pencil,
Q-interactive (select subtests)

Administration Time:

General assessment: 45 min–1 hr

Selective and Diagnostic assessments: variable

Comprehensive assessment:
90 min–3 hrs

Comprehensive evaluation with a single tool

With 32 stand-alone subtests, NEPSY-II offers a tailored assessment across 6 domains to address specific referral questions related to areas of **attention and executive function, language, memory and learning, sensorimotor, visuospatial processing, and social perception.**

NEPSY-II Subtests by Domain

Attention & Executive Functioning	Language	Memory & Learning	Sensorimotor	Visuospatial Processing	Social Perception
Animal Sorting	Body Part Naming and Identification	List Learning	Fingertip Tapping	Arrows	Affect Recognition
Auditory Attention and Response Set	Comprehension of Instructions	Memory for Designs	Imitating Hand Positions	Block Construction	Theory of Mind
Clocks	Oromotor Sequences	Memory for Faces	Manual Motor Series	Design Copying	
Design Fluency	Phonological Processing	Memory for Names	Visuomotor Precision	Geometric Puzzles	
Inhibition	Repetition of Nonsense Words	Narrative Memory		Picture Puzzles	
Statue	Speeded Naming	Sentence Repetition		Route Finding	
	Word Generation	Word List Interference			

Comprehensive descriptions of subtests available [here](#)

Flexible administration

Choose the most appropriate content depending on the evaluation needs and characteristics of the child.

- **General:** Conduct a brief assessment across the 6 domains (45 min – 1 hour).
- **Selective:** Choose individual tests to evaluate specific aspects or adapt to the evaluation needs (variable time).
- **Diagnostic:** Use recommended batteries based on specific diagnoses (variable time).
- **Comprehensive:** Apply all age-appropriate tests for a full picture of the child's neuropsychological state (90 min. – 3 hours).

Referral batteries assist with identifying typical childhood disorders including ADHD, reading disorder, language disorders, autism spectrum disorder, and mild intellectual disability:

- Learning Differences – Reading
- Learning Differences – Math
- Attention/Concentration
- Behavior Management
- Language Delays/Disorders
- Perceptual/Motor Delays/Disorders
- School Readiness
- Social/Interpersonal

Comprehensive information for diagnostic decision-making, strengths and weakness analyses, intervention planning, and monitoring progress over time.

- **Primary scores** describe the overall or main abilities measured by the subtest
- **Process scores** provide more specific information on the component skills required to complete or influence performance on the task
- **Contrast scores** are score comparisons (within or between subtests) that provide information on the performance of a higher-level skill while controlling for a lower level or more basic skill
- **Behavioral observations** provide quantitative data on common behaviors observed in clinical populations of children and teens
